DETAILED ACTION

Response to Amendment

1. In response to the Amendment received on November 10, 2008, the examiner has carefully considered the amendments.

Response to Arguments

2. Applicant's arguments, see Remarks/Arguments, filed 11/10/2008, with respect to claims 1-3 and 5-28 have been fully considered and are persuasive. The rejection of 1-3 and 5-26 under 35 USC 103(a) as being unpatentable over Wantabe et al (JP2003-105320) in view of Otaka et al (JP08-092342) has been withdrawn. In view of applicant's amendment defining the instant claims as a method of producing a gasket molding material, it is deemed that the combination of Watanabe et al and Otaka et al is not sustainable because they are not from the said endeavor and are not concerned with the same problems. Wantabe et al does not, alone or in combination expressly teach and/or suggest the use of a lower alkyl substituted alkylene glycol di(meth)acrylate compound in a UV curable liquid polyurethane composition having a viscosity at 25 °C of 150,000 to 1,000,000 mPa*s composition and/process of making a gasket material. In addition, Watanabe et al fails to teach a HDD gasket or a method of making such comprising the above defined components and composition.

Allowable Subject Matter

3. Claims 1-3, 5-14, 17, 19-22, and 24-26 are allowed.

4. The following is an examiner's statement of reasons for allowance: the prior art alone or in combination fail to teach and/or express the instantly claimed process for producing a gasket molding material, wherein said material comprises a UV curable liquid polyurethane resin having a viscosity at 25 °C of 150, 000 to 1, 000, 000 mPa*s comprising reacting a composition comprising a polycarbonatediol having a molecular weight of 500 to 5000, a trifunctional alcohol and diisocyanate, and a diisocyanate in

the presence of a (meth) acrylate compound having the general formula as defined in instant claim 1 and a dimethacrylate compound of an alkylene glycol whose alkylene group is substituted by a lower alkyl group having 1 to 5 carbon atoms and adding a terminating hydroxyl group containing (meth) acrylate. Nor does the prior art alone or in combination teach a method of making a HDD gasket material comprising the above defined UV curable liquid as defined above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
